

**Unfailing Protection &
Unbeatable Strength**

BLACK BELT tarpaulin fuses together the advantages of a cross laminated plastic film with the core strength of an HDPE tarpaulin. Thus the protection capabilities of plastic film tarpaulins are combined with the high strength of an HDPE tarpaulin, giving you double advantage.

The fabric of BLACK BELT is specially made for tarpaulins. It is extra flat and very uniform. This gives the tarpaulin extra waterproofing capabilities.

As all the inputs used are of virgin grade, BLACK BELT has an elasticity and non cracking nature that has great advantages.

The advantages of BLACK BELT are:

- It has fused inseparable layers, ideal for durability.
- It is perfectly UV stabilized for long life. Ideal for use where long term exposure is envisaged.
- Highly tear resistant, ideal for tough use.
- Extra flat tapes, giving it high waterproofing capabilities.
- Fabricated on Gen Next machine, foolproof tarpaulin.
- Strongest among all plastic tarpaulins.
- Maximum value

- Ideal for protecting moisture sensitive goods such as cement, sugar, fertilizers, paper, grains etc.
- Ideal for use in the transport industry.
- Ideal for long term exposure uses, because of its resistance to sunlight.
- Ideal for use in tough environment such as construction sites, for covering furniture, wooden crates etc., because of its very high strength.

**Satisfy yourself about BLACK BELT quality.
Test the BLACK BELT yourself...**

01

CRUSH TEST:

Crush the tarpaulin several times in your hands and look for cracks, delamination and line marks. You will find none. Observe the elasticity in the nature of BLACK BELT.

02

TEAR TEST:

Tear the fabric on both sides and in the middle. Pull the portions and check for tear propagation along the sides as well as the punctured middle portion. You will be surprised by the high strength.

03

ROPE TEST:

Rub the rope on a tarpaulin piece repeatedly with a force similar to what it may encounter in real conditions. You will observe that it is not easy to delaminate the fused layers of the tarpaulin.

We have been in the field of tarpaulins for 50 years. This has led us to design and market products that are relevant for the particular market and serve its purpose optimally. BLACK BELT is designed to use mainly for tough requirements like truck and cargo coverings, protection for sensitive goods etc.
